DETAILED ACTION

Election/Restrictions

Claims 9-16 and 18-54 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to nonelected methods and species, there being no allowable generic or linking claim. Election was made with traverse in Paper No. 7. The traversal was made specifically to independent claim 1, which applicants state is generic.

Claim Rejections - 35 USC § 112

Claims 1-8 and 17 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claims contain subject matter that was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Claim 1 cites that the support member may substantially transmit radiation. It is not understood how a support member that substantially transmits radiation will enable tubes outside of the support member to weld, yet prevent the radiation from affecting a tube located inside of the support member.

Claim 17 refers to radiopaque tubular members. Although the specification cites that sleeves 118 may be radiopaque, it does not mention that the inner and outer tubes of elected Figs. 11-12 may be radiopaque.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-8 are rejected under 35 U.S.C. 102(e) as being anticipated by U.S. Pat. 6,254,609 to Vrba et al. Vrba discloses a catheter (Fig. 1) comprising a second tubular member 144, a first tubular member 140, and support member 124. The tubular members may be made of polyethylene (Col. 5, line 65--col. 6, line 6). The support member is a sleeve and coil as illustrated in Fig. 6 and may be made of both stainless steel and a polymeric material, specifically TEFLON (Col. 5, lines 41-47). The support member may be considered both rigid and flexible, since it must be rigid enough not to kink, yet flexible enough to travel the tortuous path.
